

2024-05 Veteran Facing Forms and My VA Form Submission Research

July 29, 2024

Matt Marino (matt.marino@adhocteam.us) and Jeana Clark (jeana.clark@adhocteam.us)

U.S. Department
of Veterans Affairs

Background

Background

Form Submission Research | July 29, 2024

Forms that travel through the Benefits Intake API and into Central Mail can be accepted but don't always make it to the System of Record. When the form submission fails to reach the intended destination, the user is unaware and potentially under the assumption that their form submission is being worked on.

The Veteran Facing Forms team along with My VA would like to evaluate the usability of more visible form statuses for authenticated users.

For forms that are submitted through the Benefits Intake API and into Central Mail, the research will also evaluate updates to My VA to include more information on form statuses and next steps both for the User and VA.

Research goals

Form Submission Research | July 29, 2024

1. Evaluate the usability of presenting form statuses to users and their understanding of those statuses on the confirmation page and within My VA
 - a. How do Veterans interpret possible error states?
 - b. How long do Veterans expect to have access to this information?
 - c. Do Veterans understand where to look for claim status information?
2. Evaluate the effectiveness of presenting a “What happens next” task list and their understanding of those steps on the confirmation page and within My VA
3. Evaluate the usability and usefulness of providing a downloadable copy of the form submission
4. Gather findings on Veteran expectations of claim benefit submission and status overall
5. Evaluate the effectiveness of submitted benefit application cards on My VA

FY 24 OCTO goals supported

Form Submission Research | July 29, 2024

Supported

Not supported

CSAT for our web products have increased by 5 points.

Number of transactions processed using our products have increased by 25%.

All new products have a faster transaction time than those they replaced.

No transactions accepted by our products have a fatal error.

Our platforms hit the “elite” level (as defined by DORA) on Deployment Frequency, Lead Time for Changes, Change Failure Rate, and Time to Restore Service.

Our platforms measure and improve the satisfaction of their internal users.

Our platforms power twice as many interactions compared to last year.

Our team health survey indicates that more than 75% feel they are having a high impact on our mission.

Our team health survey indicates that less than 25% feel high stress.

Our processes, tools and decisions are documented and easily accessible to all staff.

Participant Demographics

Form Submission Research | July 29, 2024

Findings may not include the perspectives of the following underserved Veteran groups:

- Received other than honorable discharge
- Identify as Asian or Native, or LGBTQ+

We recommend studies with these underserved groups in the future.

Research Methodologies

Methodology

Form Submission Research | July 29, 2024

Moderated remote user testing was performed using Zoom, with recruitment of participants through Perigean Technologies. Testing took place June 13th, 2024 through June 25th. Twelve Veterans participated in the study.

The sessions consisted of a series of questions about VA related experiences, as well as guided run throughs of three different prototypes of a form confirmation page and My VA, created in CodePen.

Prototype Variations

Form Submission Research | July 29, 2024

We built a prototype in Codepen, and created an A/B variation that tested different ways of displaying the information within the status card.

Participant Recruitment

Form Submission Research | July 29, 2024

Originally we wanted 16 participants (with 12 minimum sessions completed) to be the goal.

After difficulty with no shows, cancellations, and candidates that didn't meet all our desired criteria, we ended up recruiting 19 participants, and had 12 completed sessions. Of the 7 sessions that were not completed, 3 were cancelled, 4 were no-shows.

Recruitment of assistive technology users, as well as users with cognitive impairments and colorblindness, were priorities.

U.S. Department
of Veterans Affairs

Recruitment and Testing challenges

Form Submission Research | July 29, 2024

Even though 11 of the recruited participants reported using assistive technology we only had one session in which assistive tech was successfully used. For two participants, we were able to pivot to a Q&A session where we were able to learn important information about how they would normally navigate VA.gov with their assistive tech and understand their mental models and desire to know more about their form statuses.

Other participants were either no shows, did not need to use their tools in our study.

U.S. Department
of Veterans Affairs

Research Findings

Key findings

Form Submission Research | July 29, 2024

1

Most Veterans indicated they want to know more details about their application, form, and claim statuses, not less.

2

Veterans struggled to understand the differences between submitted and received statuses.

3

When a downstream error was reported to the Veteran, a majority of Veteran's believed they did something to cause the error.

4

Many participants believed in the case of an error, they should be directed to the form they submitted and receive more info about what went wrong.

VA

U.S. Department
of Veterans Affairs

Key findings

Form Submission Research | July 29, 2024

5

Many participants thought the first card on My VA was about the form they just submitted. Or, they expressed frustration that the two sections were separated.

6

There is a lack of trust in the 3-4 day timeline given on the confirmation page and in the status card on My VA.

7

A majority of Veterans indicated they would download a copy of their form submission. But, they were equally confused about the expiration date next to the PDF in My VA.

8

Most participants believed there was nothing left for them to do with their submission.

VA

U.S. Department
of Veterans Affairs

Key findings

Form Submission Research | July 29, 2024

1. Most Veterans indicated they want to know more details about their application, form, and claim statuses, not less.

The majority of participants (9 of 12) indicated, to varying degrees, experience with the VA not providing them enough information during critical processes such as filing for benefits. These 9 participants made clear they wanted to be given more details about the progress of their form submissions and related claims - when changes occur being the primary concern.

"Obviously, you know, once it's submitted and they receive it. It's going to say that we received it so I would want to know. You know, what are the next steps after that? How long is it going to take..." (P14)

"Well, for me, I probably would like to see an update all the way up until it's finished being processed. So from beginning to the end." (P9)

*"How frequently would you want updates? As they're moving along?",
"Any change in status. If it goes from submit to received I want to know.
Any change in status I would want to know."(P3)*

Key findings

Form Submission Research | July 29, 2024

2. Veterans struggled to understand the differences between submitted and received statuses.

Half of our participants (6 of 12) did not fully perceive what the difference between "submitted" and "received" is, and what those terms might mean. As part of this misunderstanding, some Veterans had the impression that these steps were not part of an automated process. We also described the activity happening between submitted and received as the "VA preparing the form for review." This "preparing" verb caused Veteran confusion.

What to expect next

1

We'll prepare your form for review

It may take us 3 to 4 days to prepare your form in our system. When we finish preparing your form, the status in My VA will change from **Submitted** to **Received**.

[Check the status of your submission on My VA](#)

2

We'll review your form

If we need more information after reviewing your form, we'll contact you.

"Shouldn't it already be prepared when I send it to you? When I think of prepare. I think, you know, like you, someone prepare a meal, or they're going to do something else to the form. And I guess when I submit the form, I'm thinking I'm done, you know. and I just I should just be waiting for VA to get back to me once they've actually reviewed the form." (P3)

Key findings

Form Submission Research | July 29, 2024

2. Veterans struggled to understand the differences between submitted and received statuses.

Other Veterans did understand the differences between submitted and received statuses.

"Yeah, submitted. It means that I did what I thought I was supposed to do for the VA to receive it. But it doesn't mean that they actually got it, but by it saying that it was received, that lets me know... okay, I submitted my document, and now they have it. So they are 2 separate things." (P14)

Key findings

Form Submission Research | July 29, 2024

3. When a downstream error was reported to the Veteran, a majority of Veteran's believed they did something to cause the error.

A majority of Veterans (8 of 12) either believed that the error scenario being tested was caused by human error (not something systems based or caused by the VA itself) or was otherwise unsure of what caused the error.

"Why what did I do wrong? For me, being visually impaired, trying to find what part of the form is filled out wrong is kind of difficult." (P10)

We couldn't process the form you submitted

We're sorry. Go to your forms to find out what to do next.

Submission failed on: July 15, 2024

 We're sorry. There was a problem with our system. We couldn't process this form. Call us at [800-827-1000](tel:800-827-1000) (TTY: 711). We're here Monday through Friday, 8:00 a.m. to 9:00 p.m. ET.

Key findings

Form Submission Research | July 29, 2024

4. Many participants believed in the case of an error, they should be directed to the form they submitted and receive more info about what went wrong.

The majority of Veterans in the study (9 of 12) expressed they expected to be directed to the submitted form itself to address what went wrong (with the assumption it was human error) and/or be given more details on what went wrong and how to resolve the problem.

*"I thought the link would take me to the VA appeals place, or someplace to say "Hey! this is why your claim is being denied. And then maybe I could see more detail as to why it went wrong."
(P9)*

*When asked where do you think the link in the alert is going:
"Hopefully to the form I submitted." (P2)*

Key findings

Form Submission Research | July 29, 2024

5. Many participants thought the first card on My VA was about the form they just submitted. Or, they expressed frustration that the two sections were separated.

Eight of twelve participants either confused cards in the Claims section with the form they submitted, expressed that they did not understand the relationship between the sections, or understood but criticized the separation. A participant also suggested linking the two cards.

What your form status means ▾

SUBMITTED

**Application for authorization to release
medical information**

VA Form 21-4142

[Download your application, available until 09/16/24 \(PDF\)](#)

Submitted on: July 16, 2024

Next step: We'll prepare your form for review. This may take 3 to 4 days.

"Like I said, when, when you put this information together, do not separate it with all this stuff that has nothing to do with what I came to this page for." (P11)

Key findings

Form Submission Research | July 29, 2024

6. There is a lack of trust in the 3-4 day timeline given on the confirmation page and in the status card on My VA.

Half the participants (6 of 12) indicated they did not trust the three to four day timeline, based on a lack of general trust in VA timelines and responsiveness.

"It says 3-4 days... those 3-4 days aren't really accurate. I know it's going to take 30 days to get any sort of feedback" (P8)

"I don't like seeing that 3 to 4 days, if it's not really realistic." (P12)

"I've had plenty of those things where they say 3-4 days, and it turns out taking months. This means nothing." (P13)

"I don't follow....I mean the fact that I submitted it. They automatically have received it. Doesn't make sense. They gotta prepare it for review. All they gotta do is open and read it it's not like the slow mail that I send it, and it can take 3 or 4 days to get there....so as soon as I submitted it is there." (P11)

Key findings

Form Submission Research | July 29, 2024

7. A majority of Veterans indicated they would download a copy of their form submission. But, they were equally confused about the expiration date next to the PDF in My VA.

The majority of participants expressed a desire to download a copy of their form submission (10 of 12), and 5 of 12 participants also indicated they would want to print a copy of their form submission. With the option to download a PDF copy of the form they submitted, there was uncertainty about the significance of the date in the associated link.

SUBMITTED

Application for authorization to release medical information

VA Form 21-4142

[Download your application, available until 09/16/24 \(PDF\)](#)

"Well, I guess for me, if it's my application, I shouldn't have a, a deadline date on when I can download it. I should be able to download it at any time that I would want to download it." (P12)

Key findings

Form Submission Research | July 29, 2024

8. Most participants believed there was nothing left for them to do with their submission.

Most participants (10 of 12) indicated that they felt there was nothing else left for them to do for their submission after looking at the confirmation page they were shown.

"Just have to wait, you know. But on the next section you said 3 to 4 days. So you just have to wait. Be patient." (P10)

Secondary findings

Form Submission Research | July 29, 2024

1. There was no discernable difference in perception based on the varied titles used in Version A and Version B for the section on My VA where submitted forms are shown.
2. Veterans frequently missed the "what your status means" additional info component.
3. Veterans tended to not specifically indicate they would return to the confirmation page if given the chance.

Findings unrelated to digital experience

Form Submission Research | July 29, 2024

1. Researchers are often exposed to heavy and sensitive topics brought to the session by Veterans and aren't always sure how to debrief/process the experience in a healthy way.
2. Assistive tech can be significantly challenging to connect to zoom calls. The participant, researcher, and CAIA support may not be able to successfully connect the users screen to zoom, and the participant may not be able to load the page that needs to be tested. But switching to a Question and Answer session still leads to valuable insight for researchers.
3. Using codepen for a clickable, accessible prototype proved to be successful for both sighted and assistive technology users.

U.S. Department
of Veterans Affairs

Recommendations & Next steps

Recommendations

Form Submission Research | July 29, 2024

1

Provide clarity for terms and actions through content updates.

2

On the confirmation page, add the ability to download a PDF and print an HTML version of the form submission.

3

Build a process list that is shared between the confirmation page and My VA.

VA

U.S. Department
of Veterans Affairs

Recommendations

Form Submission Research | July 29, 2024

4

Work with VA Notify to enable notifications for each submission status change.

5

Continue to reduce and solve silent errors in VA form submissions.

6

Consolidate claims, benefit applications, and other forms displayed on My VA.

VA

U.S. Department
of Veterans Affairs

Next Steps

Form Submission Research | July 29, 2024

1. Revise designs based on findings
2. Consult with CAIA partners on changes to content as well as any accessibility considerations of design and content modifications
3. For the MVP, the Veteran Facing Forms team and My VA will collaborate together to deploy form submission status functionality on 7 forms
 - Authorize the release of non-VA medical information to VA (VA Form 21-4142 & 21-4142a)
 - Submit a lay or witness statement to support a VA claim (VA Form 21-10210)
 - Request priority processing for an existing claim (VA Form 20-10207)
 - Authorize VA to release your information to a third-party source (VA Form 21-0845)
 - Sign VA claim forms as an alternate signer (VA Form 21-0972)
 - Submit an intent to file (VA Form 21-0966)
 - Request to be a substitute claimant for a deceased claimant (VA Form 21P-0847)
